

Small Business Internet in Alaska

A Guide to Determining
What Internet Plan
is Right for You

A Solution Built for Alaska

You may be asking yourself: *is my current Internet service still suited to my business' needs?*

Just as your business goes through phases of growth and expansion, so too should your network. When you first start out and have just two employees working out of a garage, a commercial plan may suffice, but as you grow you need to continually assess your unique network needs and upgrade accordingly.

At GCI, we believe in providing the most appropriate solution to meet our customers' needs. Our experienced small business sales representatives can help you understand what solution is right for your business today.

For most common business applications, Business Internet is a fast, flexible and reliable solution. For more performance with symmetrical speeds, Premium Business Internet is the right choice. For enterprise-level needs, DIA best meets a business' operating needs. Other times, a custom solution with carrier diversity and multiple backups is the only way to ensure your connectivity is 100% reliable even is one service fails.

The Most Advanced Statewide Network

Over the past 40 years, GCI has invested millions of dollars into building Alaska's largest and most robust statewide network, including 7,700 miles of fiber-optic cable. We strive to always provide the best connectivity options for every customer, in every situation, and in every community in Alaska.

As a business born and raised in our great state of Alaska, we understand the complexities of operating in this unique environment, and we have decades of experience crafting solutions to meet every business need. We can help assess the right solution for you based on your unique business use cases.

Internet Plans For All Types of Small Businesses

Driven by the belief that Alaska businesses deserve flexible solutions that can grow alongside them, we designed several Internet Plans for Alaska's small to medium-sized businesses. Our plans empower you with the ability to scale your Internet service to align with your business needs.

GCI Business Internet is a fast, flexible solution that supports everyday business applications and provides a foundation for long-term growth. Powered by Alaska's most advanced network, Business Internet provides high-speed broadband with asymmetric speeds up to 2 Gbps / 75 Mbps.

GCI Premium Business Internet provides an enhanced experience designed for performance with symmetrical speeds and unlimited usage. Backed by our premium 24/7/365 support and delivered over fiber, Premium Business Internet is available in two affordable options: 50/50 Mbps and 150/150 Mbps.

DIA in Alaska

You may be wondering: *is Dedicated Internet Access (DIA) right for your business?*

The answer is: **it depends.**

In our experience, DIA is best suited for businesses for which reliability and predictability of service are mission-critical and cannot be delivered over other solutions. However, this varies based on the nature of the business and the speed at which it operates.

Over the past 40 years, GCI has invested millions into building Alaska's largest and most robust statewide network, including 7,700 miles of fiber-optic cable. For DIA customers, this means your service will operate on Alaska's most advanced network and will benefit from the closed loops built into our network for geographic redundancy.

We believe in helping customers understand what they need based on their applications and business requirements. We can help determine the right solutions for the situation.

As a vital member of Alaska's small business community, you deserve a technology partner who understands the complexities of working in Alaska and knows how to craft solutions for every challenge Alaska businesses might face.
